

Guideline for FYP Revision (Post-Evaluation Corrections)

This guideline explains the process students must follow to address feedback received from supervisors or evaluation panels after a proposal defense, mid-evaluation, or final defense/viva, and to properly document and resubmit the revised work.

1. Purpose

Revisions ensure that feedback given by supervisors or the FYP evaluation panel is properly incorporated into the report and/or the developed system before the project is considered complete. This guideline standardizes how revisions are tracked, submitted, and approved.

2. When Revisions Are Required

- After the Proposal Defense, if the panel requests changes to scope, objectives, or methodology.
- After Mid-Evaluation, if progress, implementation, or documentation is found incomplete or incorrect.
- After the Final Defense / Viva, if the panel or supervisor requires corrections before final approval.
- After the Plagiarism / Similarity Report, if the similarity index exceeds the allowed threshold.

3. Revision Process & Timeline

1. Collect the official feedback sheet or evaluation form from the supervisor or panel.
2. Log every comment in the Revision Tracking Sheet (see Section 5), one row per comment.
3. Incorporate each requested change into the report, code, or presentation as applicable.
4. Get the completed Revision Tracking Sheet signed / approved by the supervisor confirming each point is addressed.
5. Resubmit the revised document, along with the signed tracking sheet, within the deadline communicated by the FYP Coordinator (typically 5 to 10 working days unless stated otherwise).
6. Late or incomplete revisions may result in a delayed evaluation or a reduced grade, per department policy.

4. Common Types of Revisions

Revision Type	Typical Examples
Content / Technical	Missing objectives, weak methodology, incomplete results, insufficient testing/validation
Formatting & Structure	Incorrect heading styles, missing table of contents, inconsistent referencing/citation style
Language & Grammar	Spelling errors, unclear sentences, inconsistent tense or terminology

Literature Review	Outdated or insufficient references, missing comparison with existing work
Plagiarism / Similarity	Similarity index above allowed threshold; requires rewriting flagged sections
Presentation / Viva Feedback	Panel-requested changes to scope, diagrams, demo, or documentation

5. Revision Tracking Sheet Format

Every revision must be documented using a table similar to the one below and attached at the start of the resubmitted document. This creates a clear audit trail between the panel's comments and the changes made.

Sr.	Reviewer Comment	Section / Page	Action Taken	Status

6. Resubmission Checklist

- All comments from the feedback sheet are logged in the Revision Tracking Sheet.
- Every comment has a clear, specific action taken (not just "Done" or "Fixed").
- Updated report follows the approved formatting and title guidelines.
- Similarity/plagiarism check re-run if content was rewritten, and report attached.
- Supervisor has signed off on the Revision Tracking Sheet.
- Final file named and submitted per the FYP Coordinator's naming convention and deadline.

7. Do's and Don'ts

Do

- Address every single comment, even minor ones; do not skip items you disagree with, discuss them with your supervisor instead.
- Keep a copy of the original evaluation feedback for reference until final approval.
- Highlight or track changes in the document so reviewers can quickly verify corrections.

Don't

- Don't resubmit without the signed Revision Tracking Sheet, incomplete submissions will not be evaluated.
- Don't make unrelated changes to scope or content beyond what was requested without supervisor approval.
- Don't miss the resubmission deadline without prior written extension approval from the FYP Coordinator.
