

Guideline for Project Domain / Title Selection

This guideline explains how to formulate a strong, well-structured title for both Research-Based and Project (Development)-Based Final Year Projects (FYPs), along with recommended project domains and examples.

1. General Rules for Title Formation

- Keep the title concise.
- Use Title Case (capitalize major words); avoid ALL CAPS or all-lowercase titles.
- The title must clearly indicate the domain, technique/approach, and application area.
- Avoid vague, generic words alone (e.g. just "System" or "Application") without specifying what it does and for whom.
- Avoid unnecessary abbreviations; if used, they must be standard and widely recognized (e.g. AI, IoT, ML).
- The title should be unique and must not duplicate a previously approved FYP title in the department.
- Avoid using first-person language ("My Project on...") or marketing language ("Best", "Ultimate", "Revolutionary").
- The final title must be approved by the FYP Supervisor and FYP Committee .

2. Title Format for Research-Based Projects

Research-based titles focus on investigation, analysis, comparison, or evaluation of a technique, model, or phenomenon.

Characteristics of a good research-based title:

- Names the methodology, model, or algorithm being studied or proposed.
- Indicates the nature of the study, e.g. "A Comparative Study", "An Empirical Analysis", "A Systematic Review", "A Novel Approach".
- Clearly states the problem domain or application the research addresses.

Examples:

- *"A Deep Learning Approach for Early Detection of Diabetic Retinopathy Using Retinal Fundus Images"*
- *"Sentiment Analysis of Twitter Data Using Transformer-Based Models: A Comparative Study"*
- *"An Empirical Evaluation of Intrusion Detection Techniques for IoT Networks"*

3. Title Format for Project (Development)-Based Projects

Project-based titles describe a tangible system, application, or platform being designed and developed.

Characteristics of a good project-based title:

- Names the deliverable clearly: System, Application, Platform, Portal, or Dashboard.
- Specifies the target users or the domain it serves (e.g. students, retailers, farmers).
- Optionally specifies the platform or core technology (Web, Mobile, IoT, AI-Based).

Examples:

- *"AI-Based Attendance Monitoring System Using Facial Recognition"*
- *"E-Commerce Mobile Application for Local Handicraft Vendors"*

4. Project Domains & Example Titles

Choose a domain that matches your team's skills and the year's approved FYP categories. The table below shows common domains with one research-based and one project-based example each.

Project Domain	Example Research-Based Title	Example Project-Based Title
Artificial Intelligence & Machine Learning	A Machine Learning Approach for Predicting Student Academic Performance	AI-Based Personalized Learning Recommendation System
Web & Mobile App Development	A Comparative Analysis of Cross-Platform Frameworks for Mobile App Performance	Online Book Rental & Exchange Mobile Application
Networking & Cybersecurity	An Empirical Study of Intrusion Detection Techniques in IoT Networks	Network Traffic Monitoring & Threat Alert System
Data Science & Big Data Analytics	Sentiment Analysis of Customer Reviews Using Deep Learning Models	Sales & Inventory Analytics Dashboard for Retail Chains
Internet of Things (IoT) & Embedded Systems	An IoT-Based Framework for Real-Time Environmental Monitoring	Smart Irrigation System Using Soil Moisture Sensors
Computer Vision & Image Processing	A Deep Learning Model for Automated Skin Disease Classification	Real-Time Face Mask Detection System for Public Entry Points
Blockchain & Distributed Systems	A Blockchain-Based Framework for Secure Academic Certificate Verification	Decentralized Voting System Using Blockchain
Software Engineering & DevOps	An Investigation into Test Case Prioritization Techniques for Agile Projects	Automated CI/CD Pipeline Management Portal

Game Application Development	An Evaluation of Procedural Content Generation Techniques in 2D Game Design	3D Adventure Game Application for Educational Learning of Local History
Hardware-based/Embedded Systems	A Comparative Analysis of Microcontroller Platforms for Low-Power Embedded Applications	Hardware-Based Smart Attendance System Using RFID and Arduino
Desktop based Application	A Performance Analysis of Cross-Platform Desktop Application Frameworks	Desktop-Based Inventory & Billing Management System for Retail Stores

5. Do's and Don'ts

Do

- Discuss and finalize the title with your supervisor before submission.
- Make sure the title reflects the actual scope of work, neither overstated nor too narrow.
- Check for title uniqueness against the department's FYP repository.

Don't

- Don't use overly broad titles such as "Online System" or "Mobile App" without specifying purpose or users.
- Don't copy or lightly reword a title from a previously completed FYP.
- Don't include company/brand names unless it is an approved industry-sponsored project.
