

FACULTY OF INFORMATION TECHNOLOGY
DEPARTMENT OF COMPUTER SCIENCES

[Project Title Goes Here]

FINAL YEAR PROJECT – I (FYP-I)
PROJECT PROPOSAL
(Application-Based Project)

A project proposal submitted in partial fulfilment of the requirements
for the degree of

Bachelor of Science in Computer Science

Submitted by: [Student Name – Registration No.]
[Student Name – Registration No.]
[Student Name – Registration No.]

Supervised by: [Supervisor Name, Designation]

Department of Computer Sciences
Faculty of Information Technology
The University of Lahore, Sargodha Campus
Session: [20XX – 20XX] [Month, Year]

Project Registration Form

Project ID (for office use only):	
Type of Project	☐ Traditional ☐ Industrial ☐ Continuing
Nature of Project	☒ Development ☐ Research ☐ R&D
Area of Specialisation	[e.g. Web Application, Mobile App, Desktop System, E-Commerce, ERP/MIS]
Platform	☐ Web ☐ Mobile (Android/iOS) ☐ Desktop ☐ Other: []
Department	Computer Science
Registration No. of FYP-I	[Reg. No.] Date of Registration: [DD-Mon-YYYY]
Name of Supervisor: [Supervisor Name] Co-Supervisor (if any): [Name / None]	
Designation: [Designation] Designation: [Designation]	

Tick Development under Nature of Project for an application-based FYP-I – this indicates the proposal is centred on designing and building a working software system/product for a real or realistic client/user, rather than primarily investigating a research question. Some departments still expect a brief "novelty" note even for development projects (e.g. a new feature combination, an underserved user group, or a technical constraint you are solving) – keep this in mind for Section 4.

Project Group Members

Sr.#	Reg.#	Student Name	CGPA	Email ID	Phone #
(i) Group Leader	[Reg.#]	[Name]	[]	[Email]	[Phone]
(ii)	[Reg.#]	[Name]	[]	[Email]	[Phone]
(iii)	[Reg.#]	[Name]	[]	[Email]	[Phone]

Declaration: FYP group members have cleared all prerequisite courses for FYP-I as per their degree requirements, including:

Object Oriented Programming, Software Engineering, Database Systems-I, Report Writing Skills, and any elective directly relevant to the chosen platform (e.g. Web Engineering, Mobile Application Development).

Signature(s) of Student(s): _____

Summary of the Proposed Project

Write a single, self-contained paragraph of 200–300 words covering: the problem/need this application solves, who the intended users/client are, what the system will do, the platform and key technologies, and the expected deliverable. This is often read on its own by the FYP committee, so it should make sense without the rest of the document.

[Type the 200–300 word summary of your proposed application here. Cover: (1) the problem/need and intended users, (2) what currently exists and its shortcomings, (3) what your system will do, (4) the platform and key technologies, and (5) the expected deliverable.]

Plagiarism-Free Certificate

This is to certify that I, **[Group Leader Name]**, S/D/o **[Father's Name]**, Group Leader of the FYP-I proposal registered under Registration No. **[Reg. #]** at the Department of Computer Science, The University of Lahore, Sargodha Campus, declare that this proposal has been checked by my supervisor and that the similarity index is _____% (an acceptable limit per HEC guidance is generally below 19–20%). The plagiarism/similarity report is attached herewith as Appendix A.

Date: _____

Name of Group Leader: _____

Signature: _____

Run your proposal through the plagiarism tool your department uses (e.g. Turnitin) and insert the similarity percentage before submission – this certificate is not valid without it.

Recommendation by the Supervisor

I have reviewed this FYP-I research proposal and recommend it for approval by the FYP Committee.

Name: _____

Signature: _____

Date: _____

Signed by the FYP Supervisory / Evaluation Committee

S.#	Name of Committee Member	Designation	Signature & Date
1	[Name]	[Designation]	
2	[Name]	[Designation]	
3	[Name]	[Designation]	

Approval by the Departmental FYP Committee

Certified that this FYP-I proposal has been reviewed by the members of the Departmental FYP Committee and considered suitable for registration.

Secretary, Departmental FYP Committee

Name: _____

Signature: _____

Date: _____

Chairperson / Head of Department, Computer Science

Name: _____

Signature: _____

Date: _____

Formatting Guidelines	6

1 Introduction & Background

Introduce the domain and context: who has this problem, and how is it currently handled (manually, with a competing product, with no tool at all)? Narrow down to the specific system you propose to build. End with one or two sentences stating what this proposal covers. Typical length: 300–500 words.

[Write your introduction and background here.]

2 Problem Statement

State precisely, in 1–2 short paragraphs, the problem your application solves and who experiences it. A strong problem statement names a concrete pain point (e.g. manual process, data silos, inaccessible service) rather than a vague need for "digitalisation".

[Write a precise problem statement here.]

3 Existing Systems / Market Study

This section replaces a literature review for an application-based project. Identify 3–6 existing tools, apps, or systems that address a similar problem (competitors or related products), and summarise what each does well and where it falls short. This justifies why your project is worth building.

[Summarise existing systems/products relevant to your problem.]

Table 1: Comparison of existing systems [(edit caption)]

System / Product	Key Features	Limitations / Gap	Platform
[System 1]	□	□	□
[System 2]	□	□	□
[System 3]	□	□	□

4 Project Rationale

Explain the purpose, motivation, and relevance of building this application. What makes it worth doing – a gap in the market, an inefficiency you personally observed, an underserved user group, a new technical approach?

[Explain your motivation for choosing this project.]

4.1 Aims and Objectives

List the overall goal and 3–5 specific, measurable objectives (what the finished system must be able to do).

O1. [Objective 1]

O2. [Objective 2]

O3. [Objective 3]

4.2 Scope of the Project

Define what will and will not be covered: specific modules, features/functions, user roles, and any explicit exclusions. A clear scope prevents disputes at evaluation time about what was promised.

[Define the boundaries of your project – what is in scope and explicitly out of scope.]

5 Feasibility Study

A feasibility study is expected for application-based FYPs in place of a research methodology section. Cover at least the three dimensions below.

5.1 Technical Feasibility

[Do the required tools, platforms, APIs, and skills exist and are they accessible to you? Note any technical risks.]

5.2 Operational Feasibility

[Will the intended users actually adopt this system? What is the intended user base and how will it fit into their existing workflow?]

5.3 Schedule/Economic Feasibility

[Can this be built within the FYP-I/FYP-II timeframe with the resources (and budget, if any) available to your team?]

6 Requirements Specification

List functional requirements (what the system does) and non-functional requirements (performance, security, usability, scalability, etc.) using unique IDs so they can be traced through design, implementation, and testing in FYP-II.

6.1 Functional Requirements

ID	Requirement	Priority
FR-01	[Requirement description]	[High/Med/Low]
FR-02	[Requirement description]	[High/Med/Low]
FR-03	[Requirement description]	[High/Med/Low]

6.2 Non-Functional Requirements

ID	Requirement
NFR-01	[e.g. The system shall respond to user actions within 2 seconds under normal load.]
NFR-02	[e.g. User passwords shall be stored using a salted hash.]

7 Proposed System Design

Give a first-cut design: the overall architecture and, if applicable, key modelling diagrams (use-case diagram, ER diagram, or high-level data-flow diagram). These will be refined in FYP-II – FYP-I only needs enough to show the design is thought through and feasible.

7.1 Proposed System Architecture

[Describe the overall architecture (e.g. client-server, three-tier, microservices, mobile app + back-end API). Insert a diagram below.]

Figure 1: Proposed system architecture

7.2 Use Case Overview

List the main actors (user roles) and their key use cases. A use-case diagram image can replace/accompany this list.

- [Actor 1 (e.g. Customer): use case, use case, use case]
- [Actor 2 (e.g. Admin): use case, use case, use case]

8 Individual Tasks

Mandatory if this is a group project. List each member's tasks and justify the planned one-year effort split across FYP-I and FYP-II.

Team Member	Activity	Tentative Date
[Name 1]	[Activity 1]	□
	[Activity 2]	□
	[Activity 3]	□
[Name 2]	[Activity 1]	□
	[Activity 2]	□

9 Timeline (Gantt Chart)

Mandatory. Show which tasks run in which period, which run in parallel vs. series, and the duration of each. Replace the table below with a proper Gantt chart (e.g. using the `pgfgantt` package) if your department expects one.

Table 2: Milestones for FYP-I

Duration	Milestone
[Week 1–2]	Market study, requirements gathering, and finalisation of scope.
[Week 3–4]	Feasibility study and technology selection.
[Week 5–8]	System design (architecture, database, use-case/ER diagrams).
[Week 9–12]	Prototype / proof-of-concept implementation of core modules.
[Week 13–14]	Preliminary testing of the prototype.
[Week 15–16]	FYP-I report writing and proposal defence.

10 Tools and Technologies

List the programming languages, frameworks, libraries, database, hosting/deployment platform, and any other tools the project will use.

- [Frontend technology / framework]
- [Backend technology / framework]
- [Database]
- [Hosting / deployment platform, version control, IDE]

11 References

*Cite any standards, APIs, frameworks' documentation, or comparison sources used in Section 3. This template uses a **separate** `references.bib` file – add your sources there and cite with `\citep{key}` or `\citet{key}` instead of typing references by hand.*

[Cite your sources in the text above using `\citep{key}` – the reference list is generated automatically below from `references.bib`.]

Formatting Guidelines for This Template

These guidelines are already applied by this template's styles – keep them consistent if you add new content.

- *Font: Times New Roman throughout (applied via the `times/mathptmx` packages).*
- *Heading 1 (`\section`): 16pt, bold.*
- *Heading 2 (`\subsection`): 13pt, bold.*
- *Heading 3 (`\subsubsection`): 12pt, bold italic.*
- *Body text: 12pt (via `mathptmx`), single line spacing.*
- *Figure captions: below the figure. Table captions: above the table. Cross-reference every figure/table in the text (e.g. “see Fig. 1”).*
- *References: IEEE numbered style, generated from `references.bib` via `bibtex` – cited in order of first appearance.*
- *Margins: 1 inch on all sides, A4 paper (set in `uolfyp.cls`).*
